For Orders please visit us on line at www.polmex.com.au

(1)

- ❑ Separate remote into two parts: key blade and key shell, using small flat screwdriver
- ❑ turn the key over so that the buttons are on the back to locate a small groove near the blade/key end of the shell
- ❑ insert small screwdriver into groove and twist to open

2. pull blade part from remote control and separate pieces

3. Remove electronic board from the shell

4. separate remote into pieces

5. Old buttons are an over mould to the cover and have to be removed

6. Just pull old rubber skin and remove it from the top part of the shell

7. Cover should look as shown on the side, free from any old button remnants.

(8)

- ❑ Insert new buttons from outside of the cover till they fit in position.

- ❑ Check if buttons sit properly and re-fit them is necessary.

9. To re-assemble remote, place all parts in reverse order. Close remote control and audibly latch into key part. Test buttons as your remote works straight away with no need for re-programming.
