Supplying to the market Replacement Silicone Buttons for worn out remote keys of various car makes and models: Land Rover, Nissan, Holden, Commodore, Kia, Mitsubishi, Ford, Toyota

For Orders please visit us on line at www.polmex.com.au

Nissan – Almera, Primera, Micra 200SX (1993 -1998)

1. Open remote with flat screwdriver on the split line.
2. Remove existing rubber insert with embedded buttons from inside of remote completely. (It will not be re-used)

Please note that new replacement silicone buttons are different to original in design. Instead of one-piece insert, new design consists of 2 single buttons that have to be inserted in the holes of the top cover from outside.

3. Press fit new silicone buttons into the front cover from outside of shell (as shown). No gluing is needed.

Remote will work straight away with no need for re-programming.
